

The Spy Above the Roulette Table

From the Blackjack table to the rolling ball of roulette, when money is at stake, Barix keeps an open ear to the players and dealers to make sure that everyone is playing fair.

With the Barix Annunicom it is possible to record audio data synchronized with the concurrent acquisition of video data via web cameras. With this technique, web camera surveillance systems not only record the audio they have been missing, but also have the ability to get the microphone inches away from the surveillance target to get close and personal.

The microphone equipped Barix Annunicoms are currently being utilized in the Real-Shot surveillance systems developed by Sony and have successfully been delivering the audio the Sony cameras have been missing.

The transmission of the audio and video data occurs through the existing network infrastructure of the building. By adding a Barix Barionet to this system it is possible to create on the spot surveillance triggered by someone going through a secured door.

The Barix Barionet can interface to necessary sensors and trigger video cameras guarding important door ways so that when the doors are opened, instant video can be transmitted to the command centers for high priority monitoring.
