

BARP – the Barix Paging solution

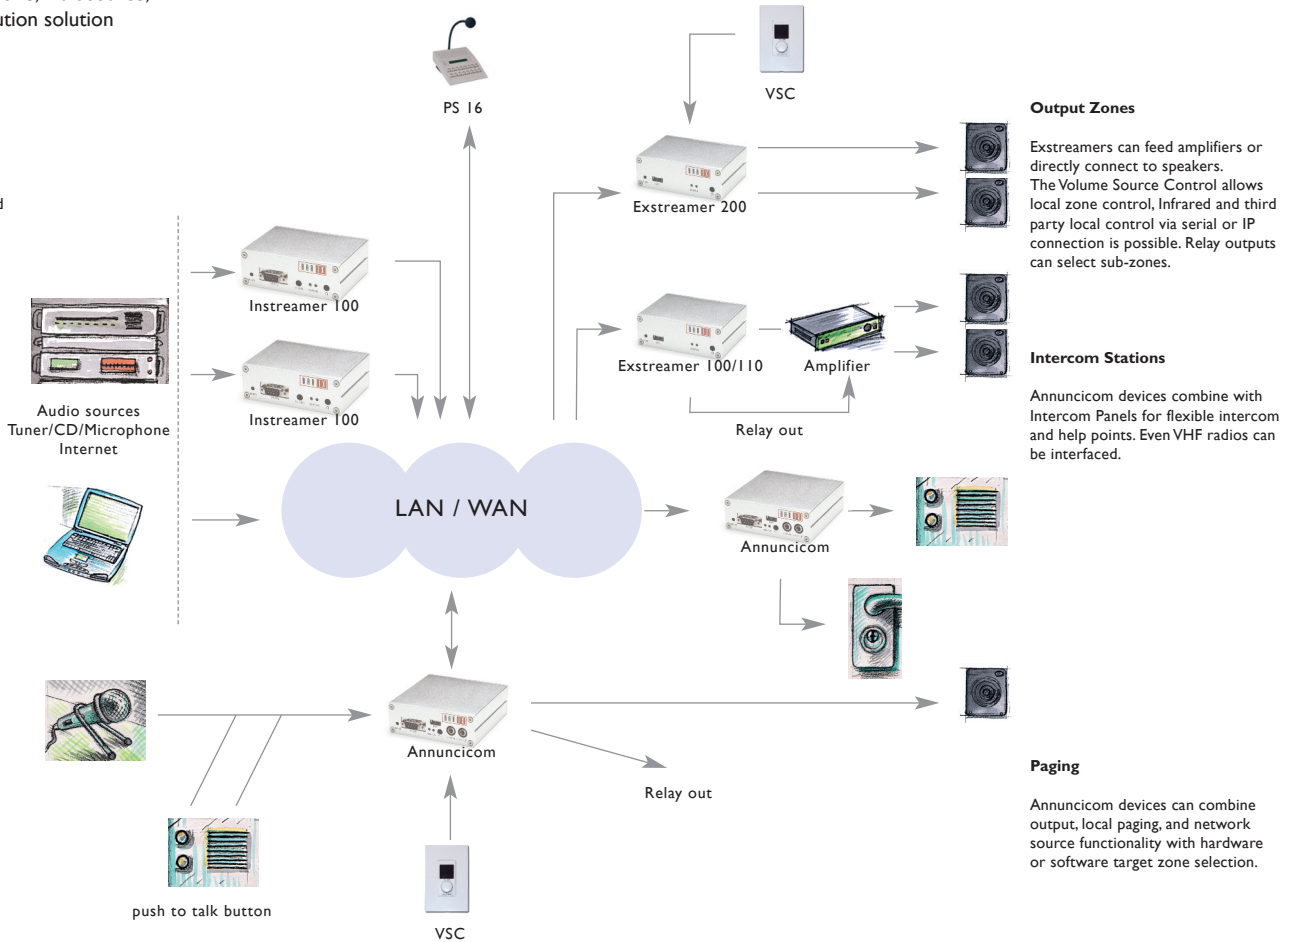

IP Standards based multizone, multisource, high quality audio distribution solution

Paging Sources

Paging can be done with PS16 Stations, software solutions and other sources, even SIP capable phone systems can be connected using Annunicom devices or software.

Music Sources

Background Music channels can be generated on PCs from playlists, internet radio, and on Annunicom devices from USB content. Live sources can be fed using Instreamers.

Output Zones

Extreamers can feed amplifiers or directly connect to speakers. The Volume Source Control allows local zone control, Infrared and third party local control via serial or IP connection is possible. Relay outputs can select sub-zones.

Intercom Stations

Annunicom devices combine with Intercom Panels for flexible intercom and help points. Even VHF radios can be interfaced.

Paging

Annunicom devices can combine output, local paging, and network source functionality with hardware or software target zone selection.
