

## Product change notification

Dear Sir or Madam,

The OEM manufacturer of the Annunicom PS16 has introduced a new Display HW module on the device.

The new HW revision is functionally compatible with the one currently purchased by your Organisation i.e. Annunicom PS16 p/n 2008.8057, as far as the Firmware running on this device makes usage of the latest SW drivers.

Barix has updated, and will provide free of charge, the Firmware modules and packages packages for the new HW revision. Higher level applications (in ABCL) and API, UI etc of the devices do not change. The new Firmware will be backwards compatible, supporting both the legacy as well as the new HW revision.

The Annunicom PS16 device has been validated both hardware and software-wise in order to ensure the maximum transparency for customers and functional backwards compatibility. It is advised that Customers confirm full functionality on receiving device shipments.

Please find the Product Change Notification (PCN ID 20141015DG1) attached, which indicates all the changes as mentioned above.

If you have any questions, please do not hesitate to contact our team as listed on the PCN.

Thanks for your understanding and cooperation.

Kindest regards,

Domenico Gambino  
VP Sales

# Product Change Notification

**Notification Date:** 15/10/2014

PCN: 20141015DG1

## **Type of Change**
