

- + Feature rich cloud solution for background music, message on hold and announcement delivery
- + Multi-location background music delivery to retail outlets, hotel chains, fitness centers and others
- + Scheduled localized announcement insertion for entertainment, information and advertising
- + Turn-key solution for audio content providers

SoundScape Solution

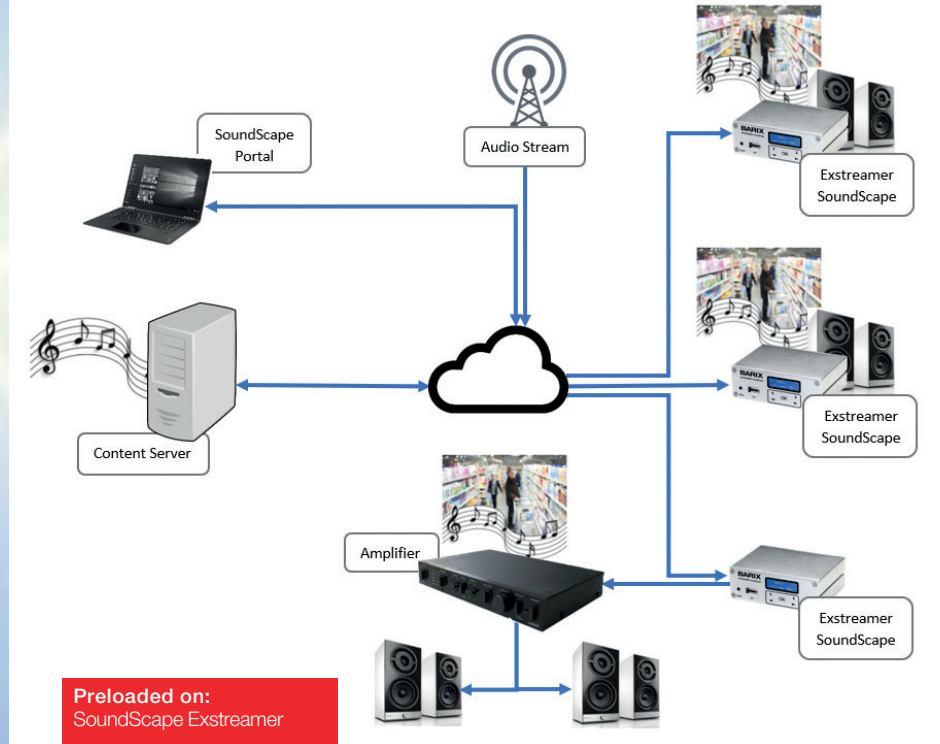

SoundScape is a complete solution to manage and distribute audio over IP networks. With SoundScape, service providers now have a single, centralized solution for content delivery and network-wide monitoring and management, instead of requiring different platforms. The SoundScape solution brings together a central management software portal with corresponding audio playback devices.

Users with administrative access can create and schedule playlists featuring music, ads and promos from the head office, and can configure or update the firmware of the player devices across the network! At the play-out locations, Barix devices deliver high-quality audio content to speaker systems, with targeted advertisements seamlessly fading in and out of music streams.

FEATURES:

- + Centralized management software (monthly subscription fee)
- + User friendly web interface
- + Reliable audio players with high-quality music reproduction
- + Dynamic ad insertions with seamless fade-in/out
- + Encrypted audio file distribution and storage
- + Seamless switching between live streams, stored playlists
- + Alarm generation, network reporting for monitoring and troubleshooting
- + Strong password protection
- + Advanced user management
- + Detailed time stamped logging of actual songs and adverts played
- + Encryption of content for copyright security
