IP Former InformaCast
IP Speaker Amplifier.

The IP Former converts existing passive loudspeakers into network loudspeakers. It handles a variety of prioritized IP audio inputs such as unicast and multicast RTP and HTTP supporting many audio formats including AACplus, MP3, G.711 and G.722. IP-Former registers as SIP VoIP endpoint and it natively supports Singlewire’s InformaCast. The solid metal case can be mounted directly to a speaker using the transformer mounts. The built in 8W full digital class-D audio amplifier provides high quality audio signals to a 2, 4 or 8 Ohm in-wall, in-ceiling or tabletop speaker. The device is powered using Power over Ethernet (PoE). Configuration of the device is done via the internal web interface.
